

☺ LangGraph: Build Stateful Agentic AI graph

Monthly AI News Summary

Okay, let's tackle this query. The user wants me to summarize AI news articles into markdown format based on specific guidelines. First, I need to parse the provided articles and extract the necessary information: date, summary, and source URL. The dates need to be in IST timezone and formatted as YYYY-MM-DD. The summaries should be concise sentences, and the news items should be sorted by date, latest first. Looking at the content provided, there are multiple articles with different dates. Let me start by identifying each article's date. The first one has a date of Mon, 29 Sep 2025 13:47:38 GMT. Converting that to IST (which is UTC+5:30), that would be 19:17:38 IST on the same day. So the date becomes 2025-09-29. The summary mentions AI reshaping workplaces and job cuts by IT majors and global giants. The source URL is given.

Next, the second article is from Sat, 27 Sep 2025 00:58:04 GMT. Converting to IST, that's 06:28:04 IST on 2025-09-27. Anthropic expanding in India. URL provided.

Third article is from Tue, 14 Oct 2025. Converting GMT to IST, it becomes 2025-10-14. Google's \$15B investment in AI hub. URL.

Continuing this way for each article, I need to check all the dates and convert them to IST. Then summarize each article into a concise sentence. Also, ensure that the markdown format is correct with the date as a header, followed by the summary and URL as a link. Finally, sort them by the latest date first.

I notice some articles might have overlapping dates or different time zones. Need to make sure all dates are converted properly. Also, check for any duplicates or articles that might not fit the criteria. For example, the content about "300 schoolkids learn AI skills at NDMC workshop" has a date of 2025-09-30, so it should come after the 27th of September article.

After sorting all the articles by date in descending order, I'll format each with the correct markdown structure. Ensure that each summary is a single line and captures the main point of the article. Also, check that URLs are properly linked as markdown links.

Wait, some articles have dates in October, so they should be the latest. For example, the article from 24 Oct 2025 is the most recent. Let me list all the dates converted to IST:

- 2025-10-24: Google expands India's agricultural AI APIs.
- 2025-10-27: Schemaninja launches AI content marketing platform.
- 2025-10-27: Devdiscourse on AI in agriculture.
- 2025-10-24: Fox News AI Newsletter article.
- 2025-10-24: Lokmat Times article on Google's agricultural AI.
- 2025-10-16: Matters.AI raises funds for AI security engineer.
- 2025-10-14: Google's \$15B investment in AI hub.
- 2025-10-07: CCI study on AI and competition.
- 2025-10-06: GICPDT leads AI education.
- 2025-10-04: Tech news roundup on AI.
- 2025-10-01: Tech News Tsunami on enterprise deals.
- 2025-09-30: AI in agriculture increasing crop yields.
- 2025-09-29: AI reshaping IT workforce and job cuts.
- 2025-09-28: Billion-dollar AI bets and biotech.
- 2025-09-27: Anthropic expands in India.

Wait, I need to double-check each date conversion. For example, the article with date Tue, 14 Oct 2025 11:21:56 GMT would be 16:51:56 IST, so the date is 2025-10-14. Similarly, other dates need to be adjusted. Once all dates are correctly converted, sort them in descending order. Then create the markdown list as specified, with each date followed by the summary and URL.

Also, the user mentioned to include the date in IST, so even though the original article dates are in GMT, converting them to IST and formatting as YYYY-MM-DD is necessary. However, the user might just want the date as per the original article's date but in IST. For example, if the article was posted at 13:47:38 GMT on 29 Sep 2025, adding 5h30m gives 19:17:38 IST on the same day, so the date remains 2025-09-29. Therefore, the date format is correct as per IST, but the actual date might not change unless the time crosses midnight. For example, an article posted at 23:30 GMT on 29 Sep would be 05:00 IST on 30 Sep. But in the provided articles, only a few might cross over. Need to check each date.

After converting all dates to IST, the latest date is 2025-10-27 with two articles. Then 2025-10-24, 2025-10-16, etc. Once sorted, the markdown should be in that order. Each entry with ### [Date], then the summary with the URL as a link. Make sure to use the correct formatting without any markdown errors. Finally, review the list to ensure all articles are included and correctly ordered.
